# COMPLETE STOREFRONT SECURITY

This particular portable/mobile installation will be used every day for store opening and closing times. As you can see, the system is not attached to any storefront fixture. In this situation it is simply stored neatly out of the way during the day. This ensures that it doesn't detract from the look of the store or deter customers during business hours. In other scenarios, with both new and existing stores, pockets or storage bin's with merchandising display space would be built to store or hide the mobile system. In all of these cases, the gates are very easily operated on heavy duty casters.
