

Are you using small format I/C housings on your front doors?

Xpanda can supply our front door security gates with I/C housings, for your 7 pin cores.

This will provide you with the key control you need, with the Xpanda door security gate being keyed alike to your front doors. It will make opening and locking up easier.

If you are on a interchangeable core system, Xpanda can supply the door security gates with the I/C housings already installed. This saves you the expense of a locksmith.

Please discuss this option with me.
